student@student:~/wipro-68498/classwork/day-6$ ls -l
total 4
-r----- 1 student student 2415 Apr 12 16:12 task4linuxhistory.txt
student@student:~/wipro-68498/classwork/day-6$ ssh student@192.168.122.54
student@192.168.122.54's password:
Permission denied, please try again.
student@192.168.122.54's password: 
```

1. Run the SSH command: `ssh student@192.168.122.54`

2. Handle the "Fingerprint" (Only happens the first time): If you see a message about "authenticity," type **yes** and hit Enter.

3. Enter your password: When you see `student@192.168.122.54's password:`, type your password and hit Enter.

- **If it works:** Your prompt will change (it might look the same, but you are now "inside" the remote session). Type `exit` to leave.
- **If it says "Permission Denied":** You likely mistyped the password. Try again slowly.

How to finish the SCP Transfer:

Once you know the password works for SSH, you can run the copy command:

```
scp task4linuxhistory.txt student@192.168.122.54:/tmp/
```
