E481: No range allowed: 2 set ts=4
Press ENTER or type command to continue
student@student:~/wipro-68498/classwork/day-6$
```

1. The Scenario: Finding Errors

You can use grep to see if a specific setting exists in your file without opening the whole thing in Vim.

Basic Search

If you want to find the "set numbers" line that is causing the error: grep "set numbers" task4linuxhistory.txt

Search with Line Numbers (-n)

Since your terminal error mentioned "Line 1" and "Line 2", using the -n flag is very helpful: grep -n "set" task4linuxhistory.txt

- **Result:** This will show you every line that contains "set" along with its line number (e.g., 1:set numbers).
