

Task 5: Permissions and Ownership

1. View current permissions

To see the permissions, owner, and group of a file, use the **long listing** command:

`ls -l task4linuxhistory.txt`

```
student@student:~/wipro-68498/classwork/day-6$  
student@student:~/wipro-68498/classwork/day-6$ vim task4linuxhistory.txt  
Error detected while processing /home/student/.vimrc:  
line 1:  
E481: No range allowed: 1 set numbers  
line 2:  
E481: No range allowed: 2 set ts=4  
Press ENTER or type command to continue  
student@student:~/wipro-68498/classwork/day-6$ grep "set numbers" task4linuxhistory.txt  
student@student:~/wipro-68498/classwork/day-6$ grep -n "set" task4linuxhistory.txt  
student@student:~/wipro-68498/classwork/day-6$ vim task4linuxhistory.txt  
Error detected while processing /home/student/.vimrc:  
line 1:  
E481: No range allowed: 1 set numbers  
line 2:  
E481: No range allowed: 2 set ts=4  
Press ENTER or type command to continue  
student@student:~/wipro-68498/classwork/day-6$ ls -l task4linuxhistory.txt  
-rw-rw-r-- 1 student student 2415 Apr 12 16:12 task4linuxhistory.txt  
student@student:~/wipro-68498/classwork/day-6$ chmod 400 tasklinuxhistory.txt  
chmod: cannot access 'tasklinuxhistory.txt': No such file or directory  
student@student:~/wipro-68498/classwork/day-6$ chmod 400 task4linuxhistory.txt  
student@student:~/wipro-68498/classwork/day-6$ ls -l  
total 4  
-r----- 1 student student 2415 Apr 12 16:12 task4linuxhistory.txt  
student@student:~/wipro-68498/classwork/day-6$ sudo chown root task4linuxhistory.txt  
sudo] password for student:
```

2. Change to Read-Only for Owner (400)

In Linux, permissions are represented by numbers: **4 (Read)**, **2 (Write)**, and **1 (Execute)**.

- **Owner:** Read only (\$4+0+0 = 4\$)
- **Group:** No permissions (\$0\$)
- **Others:** No permissions (\$0\$)

Command: `chmod 400 sample.txt`

3. Change Ownership

To change the owner of a file, you use the `chown` command. Note: You often need `sudo` (admin rights) to change ownership to someone else.

Command: `sudo chown anotheruser LinuxHistory.txt`

(Replace *anotheruser* with an actual username on your system, like *root* or *student*).
